

High School

Course Catalog 2023-2024

TABLE OF CONTENTS

- 2 Mission/Core Values/Vision
- 2 Expected Students Outcomes (ESO's)
- 4 **Graduation Requirements**
- 5 Advanced Placement (AP) Courses
- Honors and AP Enrollment Criteria
- 6 **English**
- Math

- 9 Science
- 11 Social Studies
- 13 World Languages
- 15 Fine Arts
- 18 **Technology**
- 20 **Physical Education**
- 21 **Electives**

Mission

Educating minds and transforming lives to impact the world for the glory of God

Vision

Our authentic international educational community will serve as a gateway to purpose, empowering and equipping global learners to lead positive change

Core Values

Academic Excellence **Biblical Worldview** Caring Community Personal Excellence

Expected Student Outcomes

ICS's Expected Student Outcomes (ESOs) embody the characteristics we desire each student to grow in during their time at ICS, whether that time is for one semester or 14 years. ESOs are organized into three categories: interpersonal, curricular, and spiritual.

Interpersonal

ICS students will recognize their personal uniqueness through demonstrating cultural sensitivity. developing a godly self-image, and living productively.

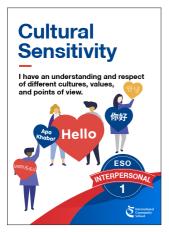

Curricular

ICS students will demonstrate academic excellence by becoming critical thinkers, quality communicators, and problem solvers.

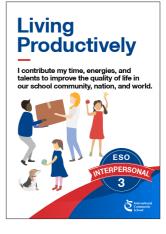

Spiritual

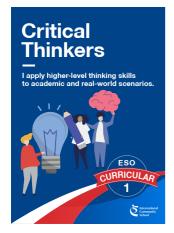

ICS students will appreciate God and His word and develop biblical character by imitating Christ, modeling teachers, and obeving biblical authority.

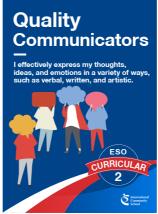

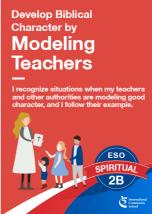

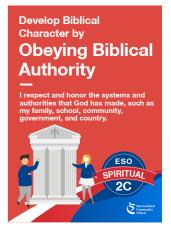

Graduation Requirements

Class of 2024

In order for a student to graduate from ICS, he or she must receive 25 credits in the following areas.

Subject Area	Required Credits*	
English	4	
Mathematics	3	Must include 1 credit each of Algebra 1 and Geometry
		 Students who take Algebra 1 or Geometry in Grade 8 must still complete 3 years of mathematics in high school
Science	3	
Social Studies	3	
World Language	2	• 2 credits must be in the same language
Fine Arts	1	• 0.5 credit of visual arts
		0.5 credit of performing arts
Technology	1	
PE	1	
Health	0.5	
Electives & Week Without Walls	6	 For each year a student is enrolled at ICS, he/she is required to take 0.5 credit of Bible
		 For each year a student is enrolled at ICS, he/she is required to take 0.25 credit of Week Without Walls
		For each spring enrolled in the HS program at ICS, students must attend Week Without Walls
		Students who do not attend Week Without Walls must complete an additional pre-arranged 50 hours of service
Senior Thesis**	0.5	
Total Credits	25	
Service Hours		6 hours / semester a student is enrolled at ICS

^{* 1} Credit is Equivalent to 1 Academic Year of Study

All school fees must be cleared by May 1st for students to be allowed to participate in graduation ceremonies. Any senior that is deficient of more than 1 required credit and/or has not submitted a senior thesis that meets basic requirements will not be allowed to participate in graduation ceremonies.

Any student who has outstanding coursework to complete - an online course, credit recovery, or otherwise, must complete the requirements and provide documentation of successful completion by July 31st of the same year.

^{**}This requirement is waived for 12 grade/4th-year students admitted for 2nd semester from another NICS school or regionally accredited American curriculum High School.

Advanced Placement (AP) Courses

ICS offers the Advanced Placement (AP) program to help prepare students for the demands of university education. AP courses follow specific content and learning objectives set by the CollegeBoard. Students who complete AP courses are eligible to sit for the AP exams at the end of the course; students who score well on the exam can potentially receive college credit at the discretion of individual colleges and universities.

Students who enroll in AP courses at ICS must meet all prerequisite coursework requirements, have the teacher's approval, and meet all requirements throughout the course. During the course selection process each spring, students have the opportunity to consult with the course teacher and academic counselor to ensure they are adequately prepared to be successful in AP coursework.

All students who enroll in an AP course must sit for the AP exam.

Honors and AP Enrollment Criteria

Students who wish to enroll in honors or AP courses must meet the following criteria:

- Complete all prerequisite courses in the same content area with a grade of B or higher.
- Receive teacher approval to enroll in the honors or AP course.

Upon enrolling in an honors or AP course, students are expected to:

- Maintain a B or higher in all honors and AP courses. Students who receive a D or F as a semester grade in an honors or AP course may be removed from the course at the principal's discretion.
- Remain enrolled in the course for the entire year.
- Maintain high standards of academic integrity.
- Attend class every day. Students who have excessive absences may be removed from honors or AP courses at the principal's discretion.

The following modules have been approved by the Council of Private Education (CPE)

The inclusion of a course description in this guide does not guarantee the course will be offered or will fit into a student's schedule or will have space for enrollment. The scheduling of a course is often dependent on a minimum number of interested students and the most effective utilization of teachers in particular subjects.

Bible

BIBLE 101 | Length: Semester

This course provides an opportunity for students to continue discovering the roots of Biblical faith which began in 8th Grade Bible. Since both testaments of the Bible are inseparably connected and integrated as one grand revelation, the continuity of God's unfolding plan of redemption found in Jesus the Messiah is emphasized. The majority of the class will be walking through the Old Testament, starting with the book of Joshua, tracing the main characters and themes of God. Key concepts include redemption, faith, God, and how humans are part of God's covenant. Healthy faith stems from healthy roots, the goal of the course is for students to apply these key concepts in their daily living in order to produce healthy and fruitful lives in their respective communities. The Old Testament paves the way for New Testament truths that will be discovered in Bible 102.

BIBLE 102 | Length: Semester

This course is a continuation of the Bible 101 course. It is a study of God's plan of redemption and the outcomes of Biblical faith. The coming of the Kingdom of God was the central theme in Jesus' mission and the core of His teachings. Students will connect the Kingdom theme found in the book of Isaiah with the Gospels. Students are challenged to move beyond merely knowing about God's kingdom to participating in God's kingdom. Topics included in this study are the Gospels, Redemption, Sermon on the Mount, the Parables of Jesus and lastly the crucifixion and Resurrection of Jesus. The course agenda will be set by the Gospels; thus, the ethical teachings of Jesus will be explored in order for students to replicate the life of Christ and Kingdom principles. Because healthy faith stems from healthy roots, the goal of the course is for students to apply these key concepts in their daily living in order to produce healthy and fruitful lives within the context of their respective communities.

BIBLE 103 | Length: Semester

This course is a continuation of the Bible 101 & 102 courses. It is a study of God's continued plan of redemption through the followers of Christ. The coming of the Kingdom of God was the central theme in Jesus' mission and the core of His teachings. This class will work through the book of Acts and selected Epistles of the Apostle Paul (focusing on Romans & Ephesians), to see where God is directing His followers today through understanding the foundations of the Christian church and how theology impacts our daily lives in the modern age. Students will connect the Biblical theme of individual redemption to community and global impact. Students are challenged to move beyond merely knowing about God's kingdom to participating in God's

kingdom. By the end of this class, students will be able to articulate basic theology, as well as the history of the church as told in the New Testament. This course will also explore the basics of apologetics as students learn how to connect their faith to the world around them. Because healthy faith stems from healthy roots, the goal of the course is for students to apply these key concepts in their daily living in order to produce healthy and fruitful lives within the context of their respective communities.

HONORS BIBLICAL WORLDVIEW | Length: Semester

Biblical Worldview is designed to prepare students to engage philosophies and perspectives they will encounter in college and life beyond high school by exploring what a Biblical Worldview is, tackling four major worldview questions: Where do we come from? Why are we here? What is right and wrong (and how decides this)? And where are we going? Students will learn to study the Bible and use it as a lens through which to evaluate their own worldviews, as well as cultural issues and topics they may encounter throughout their lives. The ultimate goal of this course is for students to be able to address any issue or question from a Biblical perspective and to engage with it authentically, using their skills of analytical Bible study. Secondarily, students will be able to articulate their own worldview as well using evidence, reflection, and analysis.

English

ENGLISH 9: LITERATURE AND COMPOSITION | Length: Year

The purpose of English 9 is to build a foundation in grammar, vocabulary, writing, literary, and poetic analysis so that the student will be able to progress and excel in English classes throughout the rest of high school. In this class, students will read novels, plays, and poems and will analyze them through writing essays that follow a claim, support, and commentary structure. By the end of the course, students should feel comfortable with the skills of comprehension (due to a knowledge of vocabulary), literary analysis, and writing (as it pertains to form, structure, and content). Students will explore how human beings relate to one another through the course of literature, and will thus be exposed to (and will wrestle with) varying worldviews, while holding these worldviews up to the lens of a Biblical worldview.

ENGLISH 10: GENRE STUDIES | Length: Year

This course is a study of grammar, literature and composition. The study of grammar is intended to help the student develop a better understanding and command of the English language. It is comprised of units on grammar, both usage and mechanics, with a view toward incorporating this knowledge into the students' writing (which will include a research paper in the spring, as well as literature-based writing). The study of literature is used to teach critical reading and analytical skills, writing and grammar skills, and to lead students to appreciate various genres of literature, both classical and contemporary.

ENGLISH 11: AMERICAN LITERATURE | Length: Year

The purpose of American Literature is to develop and improve upon the major skills of reading, writing, and analysis. While grammar and vocabulary are indeed a part of the curriculum, the most important skills in American Literature are learning to read, write, and analyze at a high level in preparation for university. In this class, students will read and analyze novels, biographies, short stories, poems, and podcasts by American voices from Frederick Douglass to Sarah Koenig. Students will develop and strengthen their writing through analysis of these works in the form of essays, as well as one major research project in the second semester that will cover a unique-to-each-student American poet. Students will explore humanity's sinful nature throughout the entirety of this course through these literary works, looking closely at injustice, apathy, and our role in making our society better utilizing a biblical worldview.

LITERATURE AND FILM STUDIES | Length: Year

If "Poets are the unacknowledged legislators of the world," as Percy Bysshe Shelley declared, then it took more than The Emancipation Proclamation to end slavery in the United States. The 21st century offers not only literature but also cinema as a powerful instrument for the promotion of ethical behavior and social change. "No art passes our conscience in the way film does, and goes directly to our feelings, deep down into the dark rooms of our souls," declared director Ingmar Bergman. In this course we will read a selection of texts and experience films that wrestle with the aesthetics, anxiety, and moral necessity of bearing witness. We will explore works that focus on "the banality of evil." whether oppressors are made or born. "Man's Search for Meaning," and the triumph of the will to do the right thing. Discussions will focus on film and literary theory related to: historical criticism, new criticism, archetypal criticism and poststructuralism. Philosophical and practical questions to be posed will include: Does an adaptation need to be "faithful" to its original in order to do justice to it? To what extent do literature and cinema borrow from each other? Is a text's profundity necessarily compromised when turned into a film - or does the addition of visual, aural, and other dimensions compensate for the loss of literary nuance? Moreover, we will explore how the word and the digital image have entered into a reciprocally irrevocable dialogue. In addition to analytical papers, (one to be research-based), students will be encouraged to discover what is most meaningful to them--a creative project such as a screenplay, film, or adaptation.

ENGLISH 12: BRITISH LITERATURE | Length: Year

This course is a study of British literature, with an emphasis on improving writing skills through a review of the different forms of writing (including research), as well as a review of grammar and punctuation through daily language activities. In addition, students will be learning about the literary periods and historical context surrounding each text to aid in their understanding of the material. The study of literature is used to teach critical reading and analytical skills, as well as to instill in the students a genuine appreciation of great literature that will lead to lifelong readers and learners. The review of grammar and punctuation is intended to help students develop a better understanding and command of the English language that will be exhibited in better writing skills, developed through literature-based writing.

AP ENGLISH LITERATURE AND COMPOSITION | Length: Year

This college-level course includes an intensive study of global literary works written in several genres from the sixteenth century to the present. The curriculum requirements are based on the AP® English course description and are intended to fully prepare each student for the

corresponding College Board exam at the end of the academic year. The concentration of content of this course is the study of the artistic use of language in increasing complexity as employed by skilled authors to achieve specific effects on their readers. Ultimately, the purpose of this course is to challenge students to reach a university-level proficiency in literature, which would include reading (comprehension and analysis), writing, and discussion.

AP ENGLISH LANGUAGE AND COMPOSITION | Length: Year

AP English Language and Composition is an introductory college-level composition course. Students cultivate their understanding of writing and rhetorical arguments through reading, analyzing, and writing texts as they explore topics like rhetorical situations, claims and evidence, reasoning and organization, and style.

Math

ALGEBRA I | Length: Year

This course is a study of and a review of the real number line and operations with real, rational and irrational numbers. The course is also a study of the Cartesian coordinate plane. Students will be expected to graph linear equations and linear inequalities. Students are also introduced to polynomials, functions and factoring.

GEOMETRY | Length: Year

This course is a study of geometrical concepts. Students are required to know and apply definitions, theorems, and postulates of geometrical figures such as parallel lines, circles, triangles, quadrilaterals, and other convex polygons. Students are expected to know and perform the basic constructions of geometry constructed with a compass and a straightedge, and with technology software. Students will also write direct and indirect proofs.

ALGEBRA II | Length: Year

Algebra 2 prepares students to take Pre-Calculus and Statistics. A major goal of this course is for students to develop skills in manipulating and solving linear, quadratic, exponential, polynomial, radical, rational, and logarithmic equations.

ADVANCED QUANTITATIVE REASONING | Length: Year

AQR is a class that takes students all around the world of mathematics, introducing them to concepts that have not been covered in other courses but that will affect their lives going forward. Course content will involve discussions of mathematical applications to elections, power comparisons, touring neighborhoods, networks, money, symmetry, and other real-world subjects. In all of these units we will have a chance to learn a bit more about the Creator of the world we live in, and how He holds that world together.

AP STATISTICS | Length: Year

The purpose of this AP course in statistics is to introduce students to the major concepts and tools for collecting, analyzing, and drawing conclusions from data. Students are exposed to four broad conceptual themes. The first is exploring data in describing patterns and departures from patterns. The second theme is sampling and experimentation, in addition to planning and conducting a study. The third theme is anticipating patterns, along with exploring random phenomena using probability and simulation. The fourth theme involves statistical Inference, estimating population parameters, and testing hypotheses.

AP PRECALCULUS | Length: Year

In AP Precalculus, students explore everyday situations using mathematical tools and lenses. Through regular practice, students build deep mastery of modeling and functions, and they examine scenarios through multiple representations. They will learn how to observe, explore, and build mathematical meaning from dynamic systems, an important practice for thriving in an ever-changing world. AP Precalculus prepares students for other higher-level mathematics and science courses. The framework delineates content and skills common to college precalculus courses that are foundational for careers in mathematics, physics, biology, health science, social science, and data science. Please note: This course is not a prerequisite for and does not have to be followed by AP Calculus AB or BC.

AP CALCULUS AB | Length: Year

AP Calculus AB is structured around three big ideas: limits; derivatives; and integrals of the Fundamental Theorem of Calculus. The concept of limits is foundational, as the understanding of this fundamental tool leads to the development of more advanced tools and concepts that prepare students to grasp the Fundamental Theorem of Calculus, which is a central idea of AP Calculus.

AP CALCULUS BC | Length: Year

Students in AP Calculus BC will explore the concepts, methods, and applications of differential and integral calculus, including topics such as parametric, polar, and vector functions, and series. Students will perform experiments and investigations and solve problems by applying their knowledge and skills.

Science

GENERAL BIOLOGY | Length: Year

Students in high school biology develop an understanding of key concepts that help them make sense of Life Sciences. The ideas are built upon students' science understanding of disciplinary core ideas, science and engineering practices, and crosscutting concepts from earlier grades. There are five Life Science topics in high school: 1) Structure and Function; 2) Inheritance and Variation of Traits; 3) Matter and Energy in Organisms and Ecosystems; 4)

Interdependent Relationships in Ecosystems; and 5) Natural Selection and Evolution. The performance expectations for high school Life Sciences blend core ideas with scientific and engineering practices and crosscutting concepts to support students in developing usable knowledge that can be applied across the science disciplines.

GENERAL CHEMISTRY | Length: Year

General Chemistry is a course designed to introduce students to the basics of the interaction of atoms and subatomic particles. It is a laboratory course dealing primarily with analytical, physical, and organic chemistry. Students are introduced to naming chemical formulas, balancing chemical equations, quantum mechanics, chemical bonding, solutions, and oxidation-reduction reactions.

CONCEPTUAL PHYSICS WITH ALGEBRA I | Length: Year

Conceptual Physics is a general college-preparatory physics course. Its unifying theme is that physics is the development of a set of ideas that allow an understanding of the physical world using a "concepts before computation" approach. The conceptual approach engages students with analogies and imagery from real-world situations to build a strong conceptual understanding of the physical principles ranging from classical mechanics to modern physics. With this strong conceptual foundation, students are better equipped to understand the equations and formulas of physics, as well as to make connections between concepts of physics and their everyday world. The course develops both a qualitative and quantitative understanding of the topics of structure and properties of matter, sources and properties of energy, forces and motion, waves and optics, and electricity and magnetism.

HUMAN ANATOMY AND PHYSIOLOGY | Length: Year

The Anatomy and Physiology course is designed to provide an opportunity to investigate the human body, its structure, function, and how the human body reacts to external stimuli. This course is a project and laboratory based study of the human body. The course will cover metabolism, body systems, and processes. Dissections of various animal organs will help compliment the course work. This course is for anyone considering life sciences or health majors in university.

AP BIOLOGY | Length: Year

AP Biology is a year-long course designed for high school students as an opportunity to earn AP credit on their high school transcript, as well as placement credit for an introductory college-level science course. This course is aligned to the College Board AP Biology Curriculum Framework and is based on four Big Ideas, which encompass core scientific principles, theories and processes that cut across traditional boundaries and provide a broad way of thinking about living organisms and biological systems. Twenty-five percent of instructional time is devoted to hands-on laboratory work with an emphasis on inquiry-based investigations. Investigations require students to ask questions, make observations and predictions, design experiments, analyze data, and construct arguments in a collaborative setting, where they direct and monitor their progress. This course is designed to prepare students for the Biology College Board Advanced Placement Exam.

AP CHEMISTRY | Length: Year

The AP Chemistry course provides students with a college-level foundation to support future advanced coursework in chemistry. Students cultivate their understanding of chemistry through inquiry-based investigations, as they explore topics such as atomic structure, intermolecular forces and bonding, chemical reactions, kinetics, thermodynamics, and equilibrium. The key concepts and related content that define the AP Chemistry course and exam are organized around underlying principles called the Big Ideas. They encompass core scientific principles, theories and processes that cut across traditional boundaries and provide a broad way of thinking about the particulate nature of matter underlying the observations students make about the physical world. Big Ideas cover content areas including: characteristics of matter; chemical bonding; chemical reactions and energy; kinetics; thermodynamics; and equilibrium.

AP PHYSICS 1: ALGEBRA-BASED | Length: Year

AP Physics I is a college level course designed to replicate the first semester of algebra based physics. The course is designed for any student, regardless of their career goals. Students taking Physics I should have completed Geometry and are currently taking or have taken Algebra II. Students will use algebra extensively; therefore, the math prerequisite is essential. The first semester of Physics deals with Newtonian mechanics. Topics include problem-solving skills, motion, vectors, projectiles, forces, and circular motion. The second semester is a continuation of the first. Topics include work, energy, momentum, waves, optics and electricity.

AP PHYSICS C: MECHANICS | Length: Year

This AP course applies calculus to the physics concepts learned in previous physics classes. It uses both differentiation and integration to solve problems over a wide range of situations. It also relies heavily on algebra and trigonometry to complete problems. This course will provide instruction in each of the following six content areas assessed on the AP® Exam: kinematics; Newton's laws of motion; work, energy and power; systems of particles and linear momentum; circular motion and rotation; and oscillations and gravitation.

Social Studies

MODERN WORLD HISTORY | Length: Year

Throughout this course, students will study world history, circa 1450 to the present day. We will discuss what constitutes the emergence of "modern history" in our world. Major themes included within the early modern world include empires, global commerce, and ideological shifts. European movements including revolutions, industrialism, and imperialism will be examined and studied, as well as the 20th Century World Wars and ending with the Cold War.

U.S. HISTORY | Length: Year

This class will cover the history of the United States of America from the beginnings of Native American civilizations to the present day. USA's present-day role on the world stage cannot be

properly understood without reference to its past. Global history is intertwined with American history, including political innovations, cultural attitudes, technological advancements, and economic activity. Thus, this class will equip international students to appreciate and critically evaluate the US, while interpreting historical data while reading primary and secondary sources. Using holistic perspectives, students will be able to confidently connect with the social, political, environmental, technological, cultural, religious, and economic aspects of the United States of America - whether the US is their home country of origin, or a place where they hope to pursue their future studies.

ECONOMICS | Length: Year

This year-long course provides a foundation in the study of economics while examining economic behaviors through the lenses of both microeconomics and macroeconomics. Foundational concepts in microeconomics include thinking like an economist, supply and demand, markets and prices, and competition within market structures. Macroeconomics, the study of economic behavior as a whole, includes the study of topics such as economic fluctuations as seen through GDP, money and inflation, stimulating economic growth, and the role of government in an economy. The final unit of the course will give students an opportunity to engage in a project that will grow their understanding of personal finance.

HUMAN GEOGRAPHY | Length: Year

The course introduces students to the systematic study of patterns and processes that have shaped human understanding, and use and alteration of the Earth, Students employ spatial concepts and landscape analysis to examine socio-economic organization and its environmental consequences. The course teaches students how to use and interpret maps. data sets, and geographic models. GIS, aerial photographs, and satellite images, though not required, can be used effectively in the course. They also learn about the methods and tools geographers use in their research and applications. The course teaches spatial relationships at different scales ranging from the local to the global. Our school is set in one of the great world cities, in a biodiversity hotspot, and in the world's leading urban planning environment; Singapore is a living laboratory for many of the class themes, and will help students to better understand and appreciate their sense of place.

AP HUMAN GEOGRAPHY | Length: Year

AP Human Geography introduces high school students to college-level introductory human geography or cultural geography. The content is presented thematically rather than regionally and is organized around the discipline's main subfields: economic geography, cultural geography, political geography, and urban geography. The approach is spatial and problem oriented. Case studies are drawn from all world regions, with an emphasis on understanding the world in which we live today. Historical information serves to enrich analysis of the impacts of phenomena such as globalization, colonialism, and human-environment relationships on places, regions, cultural landscapes, and patterns of interaction. The goal for the course is for students to become more geoliterate, engaged in contemporary global issues and informed about multicultural viewpoints. They will develop skills in approaching problems geographically, using maps and geospatial technologies, thinking critically about texts and graphic images, interpreting cultural landscapes, and applying geographic concepts such as scale, region, diffusion, interdependence, and spatial interaction, among others. Students will see geography as a discipline relevant to the world in which they live; as a source of ideas for identifying, clarifying, and solving problems at various scales; and as a key component of building global citizenship and environmental stewardship.

AP WORLD HISTORY | Length: Year

AP World History is designed to be the equivalent of a two-semester introductory college or university world history course. In this course, students investigate significant events. individuals, developments, and processes in six historical periods from approximately 8000 B.C.E. to the present. Students develop and use the same skills, practices, and methods employed by historians: analyzing primary and secondary sources; making historical comparisons; utilizing reasoning about contextualization, causation, and continuity and change over time; and developing historical arguments. The course provides five themes that students explore throughout the course in order to make connections among historical developments in different times and places: interaction between humans and the environment; development and interaction of cultures; state building, expansion, and conflict; creation, expansion, and interaction of economic systems; and development and transformation of social structures.

AP PSYCHOLOGY | Length: Year

This course looks scientifically at a diverse and fascinating selection of topics including the scientific process of studying behavior, statistical analysis of testing results, biology of the human mind, and states of consciousness from sleep to high levels of arousal (think World Cup finals or ICS theatrical productions). Psychology studies human development from the cradle to the last breath of life, and everything in between that involves language learning, thinking processes, motivation, work, sex, pleasure, psychological health, happiness, and how to help each other with psychological challenges such as depression and anxiety.

AP MACROECONOMICS | Length: Semester

This course is designed to give students a thorough understanding of the principles of macroeconomics that apply to an economic system as a whole. There will place a particular emphasis on the study of national income and price-level determination, as well as developing familiarity with economic performance measures, the financial sector, stabilization policies, economic growth, and international economics.

AP MICROECONOMICS | Length: Semester

This course is designed to give students a thorough understanding of the principles of microeconomics that apply to the functions of individual economic decision-makers. The course also develops students' familiarity with the operation of product and factor markets, distributions of income, market failure, and the role of government in promoting greater efficiency and equity in the economy. Students learn to use graphs, charts, and data to analyze, describe, and explain economic concepts.

AP COMPARATIVE GOVERNMENT AND POLITICS | Length: Year

AP Comparative Government and Politics introduces students to the rich diversity of political life outside the United States. The course uses a comparative approach to examine the political structures, policies, economic, and social challenges of six selected countries; China, Iran. Mexico, Nigeria, Russia and the United Kingdom. Students compare the effectiveness of approaches to many global issues by examining how different governments solve similar problems. They will also engage in disciplinary practices that require them to read and interpret data, make comparisons and applications, and develop evidence-based arguments.

World Languages

MANDARIN I | Length: Year

Mandarin is spoken by more than a quarter of the world's population and has become the second most widely used language on the Internet today. With China's rising economy and prominence in the world, Mandarin has become the most popular second language to learn. Mandarin 1 introduces students to the basics of the language, including Han Yu Pin Yin (the Mandarin phonetic system) and Chinese character writing strokes. We will also be covering topics such as: Greetings; Numbers; Date and Time; Introducing Oneself and One's Family; Countries and Languages; Occupations; and Transport.

MANDARIN II | Length: Year

Mandarin II is based on language skills learned from Mandarin I. Students will continue to expand their Mandarin vocabulary and sentence patterns. Students will develop their language skills in listening, reading, writing, and speaking in topics such as colors, clothes, weather, hobbies, school subjects, schedules, and facilities. Students will also be exposed to elements of the Chinese culture.

MANDARIN III | Length: Year

Mandarin III students will continue to learn grammar and new phrases to construct longer and more complicated sentences. Students will be able to make a series of useful sentences that can be utilized in day to day communication. Topics covered will consist of School Life, Food, Festivals, Shopping, and Travel. Through these units, students will be able to apply what they learned to the four ways of communicating in language: reading, writing, listening and speaking.

HONORS MANDARIN IV | Length: Year

Honors Mandarin IV students will continue to learn Chinese culture, idioms, grammar and usage, as they study the language more in depth. Students will develop and expand their language skills in four main areas: reading, writing, listening and speaking. Listening and speaking skills will improve with increased understanding of conversations. Reading skills will be developed through interpretation of a variety of forms of communication in everyday life. Writing exercises will help students develop and express coherent ideas drawn from idioms and previously studied content. Topics include Chinese geography, holidays, travel, Chinese cuisine, family trees, personality, community and volunteer work.

HONORS MANDARIN V | Length: Year

Honors Mandarin V places emphasis on enriching students' vocabulary while increasing their proficiency in language skills which include listening, speaking, reading, and writing, so as to communicate more fluently in a Mandarin-speaking environment. Students will also be introduced to speaking and writing for formal settings and will learn to provide improvised responses in conversations. Students will learn about topics related to Chinese culture, modern technology and lifestyle, media, careers, and comparisons between Chinese and Western cultures. Additionally, students will begin to explore literature and history of China.

AP CHINESE LANGUAGE AND CULTURE | Length: Year

The AP Chinese Language and Culture course emphasizes communication (understanding and being understood by others) by applying interpersonal, interpretive, and presentational skills in real-life situations. This includes vocabulary usage, language control, communication strategies and cultural awareness. The AP Chinese Language and Culture course is fully conducted in Mandarin and students will study in greater depth a wide range of topics such as various aspects of Chinese culture, history, literature, geography, and modern technology and lifestyle.

SPANISH I | Length: Year

Spanish I is an introductory course for beginners, and covers general vocabulary, grammar, and sentence structure that are useful and necessary for general conversations. Students will learn basic greetings, how to introduce themselves, and how to describe their hobbies and interests. Students will also learn about Latin American culture in the United States and other Spanish-speaking countries around the world.

SPANISH II | Length: Year

The purpose of Spanish II is to build on the student's understanding and conversation levels attained in Spanish I, increasing their vocabulary and reading skills. As with Spanish I, instruction will be in Spanish for the majority of the class time, so that students will become re-acquainted with the sounds of Spanish and will also be able to recognize new vocabulary and sentence structures. Students in Spanish II will be encouraged to continue listening to the language and also to respond using the Spanish words and phrases they know. While listening and speaking are still important in Spanish II, improving reading and translating skills is a major goal of this class.

SPANISH III | Length: Year

The purpose of Spanish III is to build on the student's comprehension and conversation levels attained in Spanish I and II, increase their vocabulary and reading skills, and learn about the grammar structures of Spanish through writing. As with Spanish I and II, instruction will be in Spanish for the majority of the class time so that students will become re-acquainted with the sounds of Spanish and will also be able to recognize new vocabulary and sentence structures. Students in Spanish III will be encouraged to continue listening to the language and also continue responding using the Spanish words and sentences they know. While listening, speaking, and reading are still important in Spanish III, improving writing and translating skills is a major goal of this class.

HONORS SPANISH IV | Length: Year

The purpose of Spanish IV is to build on the student's comprehension and conversation levels attained in Spanish I to III, increasing their vocabulary and reading skills, and learning about the grammar structures of Spanish through writing. As with Spanish III, instruction will be in Spanish for the majority of the class time so that students will become re-acquainted with the sounds of Spanish and will also be able to recognize new vocabulary and sentence structures. Students in Spanish IV will be encouraged to continue listening to the language and also continue to respond in Spanish. While listening, speaking, and reading are still important in Spanish III, improving writing and translating skills is a major goal of this class.

AP SPANISH LANGUAGE AND CULTURE | Length: Year

AP Spanish Language and Culture is equivalent to an intermediate level college course in Spanish. Students cultivate their understanding of Spanish language and culture by applying interpersonal, interpretive, and presentational modes of communication in real-life situations as they explore concepts related to family and communities, personal and public identities, beauty and aesthetics, science and technology, contemporary life and global challenges.

Fine Arts Visual Arts

2-D ART | Length: Semester

This is a 2D Art course that focuses on drawing skills to produce works of art that imply depth. We will use art and design principles to develop skills, explore ideas and produce a fine art portfolio. No previous art experience required.

3-D ART | Length: Semester

This course will empower students to apply aesthetic and visual language principles with 3-D skills through experimentation, projects, and exercises. Students will be building, sculpting, assembling, designing and creating art with an awareness and understanding of man-made and God-made creations. Students will learn the principles of art design and utilize them in creating and analyzing art.

CERAMICS | Length: Semester

This course will focus on empowering students to apply aesthetic concepts and use visual language in the art and craft of ceramics. Students will consider function and beauty in the creation of their art pieces. Analysis and instruction will include references in the Bible to ceramics and pottery.

DIGITAL ART | Length: Semester

Digital Art is an exploratory course where students will learn the elements and principles of design, as well as foundational concepts of visual communication in 2-D and 3-D digital design.

FOUNDATIONS OF ART AND DESIGN | Length: Semester

This course is an introduction to various studio explorations in both 2 and 3 dimensional mediums with an emphasis on the creative process while also learning about art theory and art history. Students will learn foundational skills that can be applied to any form of art or design that they may choose to continue in the future.

AP STUDIO ART: DRAWING | Length: Year

This course consists of one portfolio exam corresponding to college foundation courses. Portfolios allow flexibility of coursework while guiding students to produce college-level guality, artistic investigation, and breadth of work. The Drawing portfolio addresses drawing issues and involves decision making about how to use the elements and principles of fine art in an integrative way. Students' portfolios demonstrate skills and ideas developed, refined, and applied throughout the course to produce visual compositions. There are three sections to the portfolio: Section 1 (Quality); Section 2 (Concentration/Sustained Investigation); and Section 3 (Breadth), Portfolios are evaluated based on standardized scoring descriptors aligned with skills and understanding developed in college foundation courses.

AP STUDIO ART: 2-D DESIGN | Length: Year

The AP 2-D Design Studio Art Program consists of one portfolio exam corresponding to college foundation courses. Portfolios allow flexibility of coursework while guiding students to produce college-level quality, artistic investigation, and breadth of work. The 2-D Design portfolio addresses two-dimensional design issues and involves decision making about how to use the elements and principles of 2-D Design in an integrative way. Students' portfolios demonstrate skills and ideas developed, refined, and applied throughout the course to produce visual compositions. There are three sections to the portfolio: Section 1 (Quality); Section 2 (Concentration/Sustained Investigation); and Section 3 (Breadth). Portfolios are evaluated based on standardized scoring descriptors aligned with skills and understanding developed in college foundation courses.

AP STUDIO ART: 3-D DESIGN | Length: Year

The AP Studio Art 3-D Design Program consists of one portfolio exam corresponding to college foundation courses. Portfolios allow flexibility of coursework while guiding students to produce college-level quality, artistic investigation, and breadth of work. The 3-D Design portfolio addresses three-dimensional design issues and involves decision making about how to use the elements and principles of 3-D design in an integrative way. Students' portfolios demonstrate skills and ideas developed, refined, and applied throughout the course to produce visual compositions. There are three sections to the portfolio: Section 1 (Quality); Section 2 (Concentration/Sustained Investigation); and Section 3 (Breadth). Portfolios are evaluated based on standardized scoring descriptors aligned with skills and understanding developed in college foundation courses.

Performing Arts

CHOIR | Length: Semester

High School Choir is a traditional performing ensemble open to any willing students and is a logical extension of Middle School Choir. In High School Choir, students will learn vocal production techniques and how to read and interpret Western musical notation in treble and/or bass clef through rehearsing and performing standard choral literature throughout the year. Students will be exposed to a wide variety of musical literature including, but not limited to, classical sacred and secular choral works, jazz, Broadway and show tunes, folk music, and popular music arrangements in 2-4 parts.

KEYBOARDING I and II | Length: Semester

This course provides training and practice for a wide variety of keyboarding levels, including beginning and intermediate students.

MODERN WORSHIP BAND | Length: Semester

Modern Worship Band is both a practical and a philosophical course on the topic of Christian worship, where the primary purpose is providing music for and leading worship in chapel services and other spiritually focused events throughout the school year. Musical selections will be band-led (vocals, quitar, bass, piano, drumset) but can include any instrument, and will draw on multiple genres including modern praise and worship music, traditional, contemporary, and reformed hymnody, and international Christian music. The course is open to any interested student having intermediate-level experience with a musical instrument or in singing.

MUSIC APPRECIATION | Length: Semester

Music Appreciation is a broad-based course covering how to effectively listen to and understand music as it relates to history and culture. Participants will receive instruction in the basics of music composition and form, listening skills, audience etiquette, and a broad overview of music history. Special emphasis will be given to art music from the "Common Era" (1600-1900), including the study of representative composers and compositions. As scheduling and availability allow, students will attend and analyze one off-campus performance of "Classical" music. Students will complete various assessments including, but not limited to. journaling, guizzes, and projects throughout the course.

DRAMA | Length: Year

High School Drama will include instruction on basic acting skills and improvisation, as well as general drama production concepts such as staging, set design, props, lighting, and sound design. Students will learn and apply general theater terminology, acting skills, improvisation techniques, and accents (if applicable). Additionally, students will engage directly in the main production aspects of the focal drama including general research, rehearsal prep, blocking, set and prop choices/design, sound and lighting design, and other areas where needed.

Technology

DESIGN TECHNOLOGY: MODEL MAKING | Length: Semester

This course reinforces the knowledge, skills and concepts of Design. It aims to develop creative problem solvers who are able to understand the demands of the increasingly technological society and appreciate the importance of design for life, society, and the environment. Students are expected to develop an appreciation for the elements of design and use information/communication technology (ICT) to access information and solve problems. The design cycle will be central to the course as students inquire & analyze, develop ideas, create and evaluate products/solutions. The course content includes the mastery of the design cycle. 3-dimensional design and digital design. Assessment in this course will focus on creating design portfolios for the Digital model project and the Architectural model project.

DESIGN TECHNOLOGY: ROBOTICS DEVELOPMENT

Length: Semester

This course reinforces the knowledge, skills, and concepts of Design & Engineering. It aims to develop critical problem solvers who can merge the demand for highly functional and aesthetically appealing products - in doing so, appreciate the importance of design for life, society, and the environment. The course content includes Block Coding skills and techniques and engineering notebook for designing plans and ideas.

DESIGN TECHNOLOGY: COMPUTER SCIENCE PRINCIPLES Length: Semester

This course introduces students to the foundational concepts of computer science and programming. They will design and evaluate solutions through the development of algorithms and programs. They will incorporate abstraction into programs and use data to discover new knowledge. Students are challenged to use their creative thinking and problem skills by exploring real world applications. Students will also be exposed to the basics of Python language.

DESIGN TECHNOLOGY: COMPUTER SCIENCE APPLICATIONS **Length: Semester**

This course continues to develop the foundational concepts of computer science and programming through the codeHS courses. In the advanced course, students will choose a content focus; Web Design, Game Design, Al, or Mobile Apps. They will continue to design and evaluate solutions through the development of algorithms and programs. They will incorporate abstraction into programs and use data to discover new knowledge. Students are challenged to use their creative thinking and problem solving skills by exploring real world applications.

DESIGN TECHNOLOGY: GENIUS HOUR | Length: Semester

In Design Technology: Genius Hour, students will dig deeper into the skills they have learned in previous Design Technology courses. This course is designed to give the students opportunities to pursue their passions and build 21st century skills. Students will have the freedom to choose a focus area/skill, set their own goals, and create their own project to display their learning. Students will use the design process to identify and solve real-world problems and create imaginative and meaningful solutions using the skills and tools they are passionate about. Students will have the opportunity to develop, test and refine prototypes. This course will empower students and give them the time and space to innovate and pursue their own passion.

INDEPENDENT STUDY | Length: Semester

Independent study is intended to encompass rigorous individualized learning for students who have a strong desire to study a subject in depth. Students interested in securing an independent study must contact the HS Academic Counselor and the HS Principal, and collaborate with the teacher on a proposed course outline including goals and objectives that must be accomplished by the end of the course. The independent study contract must also identify appropriate resource materials and define strategies by which the student can successfully master the stated objectives.

YEARBOOK | Length: Year

Students will learn to manage a project that includes page design, layout, captions, taking and editing photographs, all within the context of producing a school yearbook that represents the entire school community for the particular year. Photography is a large focus of the class. Students will learn how to take and compose quality photos. This course demands time outside of class work. Students should be ready to attend school events for yearbook documentation.

AP COMPUTER SCIENCE A | Length: Year

AP Computer Science A introduces students to computer science through programming. Fundamental topics in this course include the design of solutions to problems, the use of data structures to organize large sets of data, the development and implementation of algorithms to process data and discover new information, the analysis of potential solutions, and the ethical and social implications of computing systems. The course emphasizes object-oriented programming and design using the Java programming language.

Physical Education

FUNCTIONAL FITNESS | Length: Semester

Functional Fitness is a course designed for students to learn and enjoy becoming physically fit for life. It is designed based on the principles of multimodal fitness. In this course students will learn the components of fitness, basic movements in functional fitness, and how to program workouts to suit the needs of an individual regardless of the equipment and space available. By the end of this course students will be able to build and implement a short-term physical fitness routine for themselves and equipment available to them.

HEALTH | Length: Semester

This course is designed to enhance the awareness and knowledge of a healthy lifestyle. Students will explore opportunities to be an advocate for numerous health issues as well as the opportunity to practice making healthy choices. Topics on leading a healthy life, self-esteem, mental health, time management, violence and abuse, nutrition, drugs and alcohol, and diseases will be addressed. We will also cover responsible relationships, marriage, and reproduction. All these topics will be approached with a Biblical worldview while being sensitive to modern day issues.

PHYSICAL EDUCATION I / PHYSICAL EDUCATION II

Length: Semester

Students will develop into physically fit and physically literate individuals who have the knowledge, skills and confidence to enjoy a lifetime of healthful physical activities. Along with completing the National Standards for High School Physical Education, students will also engage in fitness activities and modified team sports that will help them apply the knowledge and skills they develop.

INDIVIDUAL FITNESS | Length: Semester

Individual Fitness follows on from Functional Fitness and is designed for students to learn and enjoy becoming physically fit for life. It is designed based on the principles of multimodal fitness. In this course students will review the components of fitness, basic movements in functional fitness, and how to program workouts to suit the needs of an individual regardless of the equipment and space available. More complex movements will be introduced to the workouts as well as the element of long term planning for improvement. By the end of this course students will be able to build and implement a long-term physical fitness routine for themselves and equipment available to them.

Other Required Classes

HONORS SENIOR THESIS | Length: Year

This is an independent study class where students will work on their Senior Research Thesis. Each student is required to complete a thesis as a prerequisite for graduation. This course is designed to prepare students for college level research writing and organization. Students will be supported through workshops, study halls, conferencing one on one with instructors and the use of scholarly resources to succeed in writing their thesis. Students will learn advanced methods for research writing including: selecting high quality research questions; evaluating sources; assessing arguments and clarity of expression; and building logical support for claims. Conventions of academic writing styles will also be covered. Students should expect a high degree of interaction and coaching for writing and argumentation, rather than passively being examined. Ultimately, students should expect to complete this class having a substantial research document that they can be proud of in any future context. Students will build academic confidence as they interact with and participate in the production of knowledge.

WEEK WITHOUT WALLS (SERVICE LEARNING)

Week Without Walls (WWW) is the primary opportunity for ICS students to participate in service learning. Students join one of several teams within the high school and will participate in community service efforts by partnering with local organizations and supporting their programs. The aim for WWW is to cultivate a general attitude of service that motivates students to learn new skills, interact with new people, and understand their world both where they live and in the world at large.

Electives

ICS offers a wide variety of elective opportunities that encourage students to develop their talents and interests and to stretch themselves in new directions. Elective classes in each discipline allow for advanced study in areas of special interest and deepen student engagement with subject area content. Some programs involve extracurricular components and provide students with the possibility of travel, performance and competition. Please read the Course Catalog for information about elective offerings and any participation requirements that take place outside of the school day.

The following additional AP courses are offered through NorthStar Academy for an additional fee. Students interested in registering for these courses should contact the High School Academic Counselor for more information.

- AP Language & Composition
- AP Literature & Composition
- AP Statistics
- AP Calculus AB
- AP Calculus BC
- AP Computer Science Principles
- AP Computer Science A
- AP Environmental Science
- AP Biology
- AP Chemistry
- AP Physics
- AP Physics C: Mechanics
- AP European History
- AP Human Geography
- AP Microeconomics
- AP Macroeconomics
- AP Music Theory
- AP Psychology
- AP US Government and Politics
- AP US History
- AP World History Modern

The following modules are offered by ICS (Singapore) as a part of the American Curriculum (High School) - Electives Only course provided there is enough room for additional enrollment:

- 2-D Art
- 3-D Art
- Ceramics
- Choir
- Design Technology: Computer Science Principles
- Design Technology: Computer Science Applications
- Design Technology: Genius Hour
- Design Technology: Robotics Development
- Design Technology: Model Making
- Digital Art
- Drama
- Functional Fitness
- Guitar I
- Guitar II
- Health
- Individual Fitness
- Kevboarding I
- Keyboarding II
- Modern Worship Band
- Music Appreciation
- Physical Education I
- Physical Education II

Student Support Services Information

All information regarding student support services is available to families on the website.

The Student Support Services contains information pertaining to:

- Service Learning
- Learning Support
- English Language Learner (ELL)
- Social & Emotional Counseling
- Athletics
- College / Career Counseling
- Extracurricular activities (ECA)
- Medical support services
- Financial Assistance

International Community School (Singapore)

27A Jubilee Road Singapore 128575
